

Product Data Sheet

Convert is a combination of multiple carbon compounds and plant-derived potassium. Application of these readily available nutrients will increase the photosynthetic capability and ultimately the sugar content of the crop. When the sugar level inside a crop is increased, it will be less prone to pests and diseases, more easily withstand stresses, and will have higher yield and quality potential. Convert is an excellent food source for soil microbiology and the growing crop.

Organic Production

Convert is built with materials that meet NOP requirements for use in certified organic production and is registered with Washington State Department of Agriculture. *Please contact us if your certifier requires the WSDA material registration certificate.*

Applications

- Convert can be applied in soil bands, through irrigation, broadcast, or in foliar applications.
- Apply 2-8 quarts per acre per application.
- Apply with Compliment, our WSDA registered microbial inoculant, to enhance the performance of both products.
- Apply multiple applications in season through irrigation or as a foliar feed to enhance crop sugar production.

Product Details

Analysis: 0-0-3
Packaging: 270 gallon totes
Compatibility: Compatible with liquid fertilizers and most pesticides*

* Always perform a jar test prior to tank mixing
